

**Order entry**

COTRIS ROAD provides efficient order entry interfaces for pre and post systems, EDI, Internet order registration and much more. You get an optimum database for the later service provision. The wizard for the manual input of order data contributes, due to the logic of data restriction, for you and your customers, the increase of comfort and efficiency. Distance and running time determination, data validating, conditioning and calculation on specified database, map display, product and dangerous goods administration, customer opening hours etc. improve furthermore the quality of the order data.

**Disposition support**

The virtual, user specific disposition plan and hierarchical area filters supports during the disposition and transportation planning (by drag & drop) on units and/or means of transport. Independently of the order and (section) transportation structure COTRIS ROAD shows the procedures practically. Key Indicators like loaded kilometres and empty kilometres, sales volume/km and income/km are available directly and can be adjusted system-supported with appropriate default values. For tank/tank containers and silo transports the administration of cleaning places and the associated cleaning journeys can be integrated.

**Transport control**

With COTRIS ROAD you keep your vehicles in focus. Our transport control goes far beyond the current positioning in a map. With active service life control you create the basis for efficiency increase during the transport. Through the profound integration of various fleet communication systems COTRIS ROAD makes „Management by Exception“ possible. The central processing of all sub processes in the „Circle of Events“ (COE) and the flexible adjustment of time or event-controlled sequenced processes optimises your workflow.

**Accounting/MIS**

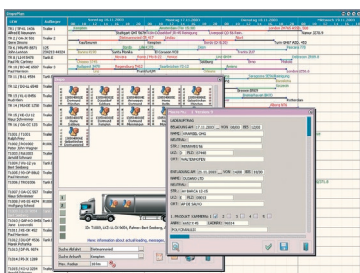

COTRIS ROAD supports a broad basis of account factors and add their combination in user-defined tables. You can define your accounting rules for an (part) automated accounting, completely flexible, individual and arbitrarily combinable. Account schema for the freight and credit note calculation, system-supported control and administration of the entrance vouchers as well as the possibility to create universal accounts are supported as well as the rule-based tax inquiry and the voucher production according accounting periods. Control the aims and key indicators of your enterprise with the efficient „Management Information System“ (MIS) of COTRIS ROAD. You will be supported by a variety of statistic evaluations while doing weak-point analysis, price negotiations etc.

COTRIS ROAD is a complete internet based software solution for logistics service providers in the road traffic (especially dangerous goods, bulk-transport, container).

COTRIS ROAD represents the complete workflow from the order entry through the disposition, the transport control to the invoice, integrating all the involved parties.

**Profit from the following advantages:**

- Service and quality improvement during the entire efficiency process
- Planning security by advanced information
- Efficiency increase by common data access
- „Management by Exception“ by active transportation control

The visually arranged user interface makes COTRIS ROAD user friendly and intuitively operated. Ask for an appointment to experience COTRIS ROAD live!
